

Best Practices FOR SERVICING AIR FILTERS

- **No substitutions.** Filters may look almost identical, but even a small difference in size can prevent a good seal or affect airflow. Selecting a filter by fit alone may also give you the wrong media.
- **Don't remove an air filter from its housing simply to inspect it.** Removing and replacing the same filter can cause dirt from the gasket sealing surface to drop on the clean filter side when the gasket is released.
- **Never hit a filter to try cleaning it.** Rapping hard enough to knock off dust damages the filter and can place your engine at risk for dust ingestion.
- **Replace your filter vs. cleaning it.** Each cleaning attempt reduces the dirt-holding capacity of a filter by 20-40%. The potential savings from risky attempts at filter cleaning won't come close to offsetting potential damage to engine components.
- **Never leave an air cleaner open longer than necessary.** An open air cleaner with the filter removed is a direct entry to the engine. Contaminants smaller than the eye can see can be damaging to an engine.
- **Follow maintenance guides.** Make sure you follow Toro's recommendations for routine filter service. This will help keep your equipment running like new.
- **Maintain service records.** Being able to show your maintenance records for potential warranty claims is essential. Toro has developed an online tool, myTurf, to help track and notify you of preventive maintenance.

OUR PROMISE TO YOU

To best protect your investment and maintain optimal performance of your turf equipment, count on Toro genuine parts. When it comes to reliability, Toro delivers replacement parts designed to the exact engineering specifications of our equipment. For peace of mind, insist on Toro genuine parts.

TORO PROVIDES:

- **Industry Leading Fill Rates** – Your local distributor, supported by Toro's parts network, offers the parts you need when you need them.
- **Part Availability** – Most local distributors deliver parts within 24 hours. Toro backs this promise with 48-hour delivery support.
- **Competitive Pricing** – Toro is comparable to will-fit providers.
- **Quality** – Genuine Toro service parts are the same parts used on the original equipment, ensuring maximum performance with less downtime.
- **Unparalleled Customer Service** – Count on dedicated support for your Toro parts needs.
- **Peace of Mind** – With genuine Toro parts, you get the right part with the correct specifications. There's no need to wonder if the part will work.

INSIST ON THE BEST. INSIST ON GENUINE TORO FILTERS.

For more information, contact your local Toro distributor at 800-803-8676.

Air Filters

TORO®

CLEAN AIR WHEN YOUR ENGINE NEEDS IT MOST

Clean air is essential to keep your engine running smoothly and efficiently.

In fact, inadequate air filtration can cause more harm to your engine than poor lubricant filtration. Ineffective filtration can cause serious wear to the engine and its components — leading to low engine power, excessive fuel consumption and ultimately, expensive repairs. Toro air filtration systems can reduce downtime and maintenance costs, and increase the life and performance of your engine.

GENUINE TORO QUALITY

Genuine Toro air filters give you consistent performance over the life of your engine. Toro air filters are a competitively priced solution for your scheduled maintenance program, helping ensure full engine performance and protection until your engine's next scheduled service.

Proprietary filter media formulation – tested in the lab and proven in the field.

RadialSeal™ filter slips easily on and off the outlet tube during installation and service. This design eliminates the separate gaskets used with metal endcap filters.

Heavy-duty liners – Corrosion resistant, coated steel liners supports the filter media during operation and maximizes airflow.

Beading is applied to both inner and outer liners to stabilize the media and prevent pleat tip wear.

Axial filter seals – strong, pliable gasket ensures a leak-free seal when properly installed. The gasket won't harden or deteriorate over the useful life of the filter.

Filter end caps are designed to protect the filter media and provide structural integrity.

Pleatloc™ media spacing keeps filter media from bunching during operation and promotes longer filter service life.

WHAT MAKES TORO FILTERS SUPERIOR?

Each filter is designed to meet specific applications. Many will-fit manufacturers have filters that will work, but the construction of the filter doesn't take into consideration actual operating conditions. Toro designs all genuine Toro filters, so you can be confident that they're manufactured to meet or exceed engine and application requirements.

THE DIFFERENCE IS CLEAR

Tests show that will-fit filters can allow up to 10 times more dirt to pass through the filter into the engine than Toro air filters. This illustration shows the amount of Arizona fine test dust that passed through the air filter media for every 1 kilogram of dust fed to the air filter during testing (the equivalent of 100 hours* of equipment operation).

*Estimate based on typical medium dust operating conditions with 92% pre-cleaner efficiency. Actual results may vary.
